team, ~~definition~~ composition assignment
    due Thursday 9/19

teams must consist of two pairs
because you will do pair programming -
and pair design, pair testing, etc

    look up enrollment in SSol
49?   One team of 5

submit early if you have a team
of exactly four - good to go

ask at beginning of class on
thursday if you do not have a team
of four - we'll rearrange & possibly
construct one team of 5 (if 49 accurate)

warm cookies and cold milk are
good for you

pair programming can be very
intense & mentally exhausting
take a break periodically
disconnect from task at hand
to approach refreshed later

(live a balanced life) learn some & think some
& draw & paint & sing & dance & play
& work every day some

communicate with others on regular basis
not just pair partner

take a nap (or a break from working
together) every afternoon

experimental prototyping

when you go out into the world, watch out
for traffic, hold hands & stick together

two programmers become one

be aware of wonder (and the power of
two brains working together)

unique skills of each individual
pool resources

if we have time, last collaborative
→ need to   exercise
          do another time
