Halloween Demo

- You need to have the "First_Demo" tag in your repository.

- You should bring a hard copy list of the use cases you have completed or partially completed for the TAs to reference during the demo.

- We DO NOT expect you to have power point slides. You only need to present your project.

- You will not be penalized for your application's visual design unless it is totally unusable.

- The demos are open for all groups to come watch.

Demo Instructions

Your team will give a ten to twelve minute presentation in the fifteen minute time slot about all of the use cases completed. We will stop each team promptly at the end of the time slot. If your team goes over the end of your time slot then you will be penalized in the presentation quality section of the rubric. You should also be able to answer questions from the TAs about your development practices and implementation.

Rubric

1. Application Completeness

   - 5 Points (25%)
   - You will be graded based on the number and priority of use cases and technical tasks you have completed. You should be completing tasks and use cases based on the assigned priority so if your team completed lots of low priority tasks at the expense of high priority tasks you will have points deducted. Your project should be about half complete.

2. Application Quality

   - 5 Points (25%)
   - You will be graded based on the current quality of your demonstrated application. You will have points deducted if your application crashes, 404s or fails during the demo. You will gain points if your functionality seems to be well implemented.

3. Presentation Quality

   - 4 Points (20%)

- You will gain points for polish and group involvement. We expect everyone in the group to participate in the presentation and you will lose points if all group members do not contribute.

4. Design Improvements

   - 4 Points (20%)
   - You will gain points if you improved your design from the previous assignment. This field will have a minimum based on your from the previous assignment. If your previous design received a 75% then you will get at least 3 points in this field.

5. Documentation

   - 2 Points (10%)
   - You should be keeping Jira up to date with your new design and progress. This field will only be graded by your TA.
